

Clasificación de Frykman

Introducida en 1967, se divide en 8 tipos; es útil para describir las fracturas del radio distal y evaluar el pronóstico.

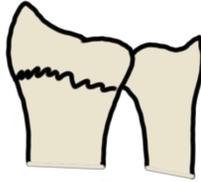

TIPOS

I y II: Fracturas extraarticulares

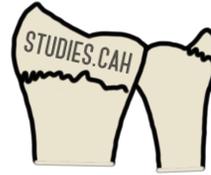

III y IV: Fracturas intraarticulares que afectan a las articulaciones radicarpianas

V y VI: Fracturas intraarticulares que afectan las articulaciones radiocubital

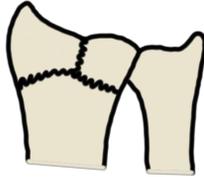

VII y VIII: Fracturas intraarticulares que afectan tanto a la articulación radio carpeana como la radiocubital.
